PRIORITY DOCUMENT
SUBMITTED OR TRANSMITTED IN
COMPLIANCE WITH
RULE 17.1(a) OR (b)

I, the undersigned, being an officer duly authorised in accordance with Section 74(1) and (4) of the Deregulation & Contracting Out Act 1994, to sign and issue certificates on behalf of the Comptroller-General, hereby certify that annexed hereto is a true copy of the documents as originally filed in connection with the patent application identified therein.

In accordance with the Patents (Companies Re-registration) Rules 1982, if a company named in this certificate and any accompanying documents has re-registered under the Companies Act 1980 with the same name as that with which it was registered immediately before re-registration save for the substitution as, or inclusion as, the last part of the name of the words "public limited company" or their equivalents in Welsh, references to the name of the company in this certificate and any accompanying documents shall be treated as references to the name with which it is so re-registered.

In accordance with the rules, the words "public limited company" may be replaced by p.l.c., plc, P.L.C. or PLC.

Re-registration under the Companies Act does not constitute a new legal entity but merely subjects the company to certain additional company law rules.

Warning

After an application for a patent has been filed, the Comptroller of the Patent Office will consider whether publication of communication of the invention should be prohibited or restricted under Section 22 of the Patents Act 1977. You will be informed if it is necessary to prohibit or restrict your invention in this way. Furthermore, if you live in the United Kingdom, Section 23 of the patent Act 1977 stops you from applying for a patent abroad without first getting written permission from the Patent Office unless an application has been filed at least 6 weeks beforehand in the United Kingdom for a patent for the same invention and either no direction prohibiting publication or communication has been given, or any such direction has been received

a) Notes

If you need help to fill in this form or you have any questions, please contact the Patent Office on 0645 500505.

b) Write your answers in capital letters using black ink or you may type them.

c) If there is not enough space for all the relevant details on any part of this form, please continue on a separate sheet of paper and write "see continuation sheet" in the relevant part(s). Any continuation sheet should be attached to this form

If you have answered "Yes" Patents Form 7/77 will need to be filed.

d) Once you have filled in the form you must remember to sign and date it.

e) For details of the fee and ways to pay please contact the Patent Office.

COMPOUNDS

FIELD OF THE INVENTION

5 The present invention relates to novel acyl pyrrolidine derivatives useful as anti-viral agents. Specifically, the present invention involves novel HCV inhibitors.

BACKGROUND OF THE INVENTION

- 10 Ikeda et al, (1997) Journal of the Chemical Society, Perkin Transactions 1: Organic and Bio-Organic Chemistry 22: 3339-3344 and Sato et al, (1995) Journal of the Chemical Society, Perkin Transactions 1, 14:1801-1809 and Sato et al, (1994) Heterocycles 37(1): 245-248 disclose 4',5'-unsubstituted acyl pyrrolidine compounds useful as reagents in the regioselective synthesis of bridged azabicyclic compounds; no medical use was disclosed for the acyl pyrrolidine compounds.
- 15 Ikeda et al, (1996) Heterocycles 42(1): 155-158 and Confalone et al, (1988) Journal of Organic Chemistry 53(3): 482-487 and De Martino et al, (1976) Farmaco, Ed. Sci. 31(11): 785-790 disclose 4',5'-unsubstituted acyl pyrrolidine compounds useful as reagents in the synthesis of tricyclic nitrogen-containing heterocycles; no medical use was disclosed for the acyl pyrrolidine compounds. Alig et al, (1992) Journal of Medicinal Chemistry 35(23):
- 20 4393-4407 discloses a 4',5'-unsubstituted acyl pyrrolidine compound useful as a reagent in the synthesis of non-peptide fibrinogen receptor antagonists; no medical use was disclosed for the acyl pyrrolidine compound.
- 25 Padwa et al, (1992) Journal of the American Chemical society 114(2): 593-601 discloses a 4',5'-unsubstituted acyl pyrrolidine compound useful as a reagent in the synthesis of azomethine ylides; no medical use was disclosed for the acyl pyrrolidine compound. Culbertson et al, (1990) Journal of Medicinal Chemistry 33(8): 2270-2275 and Crooks et al, (1979) Journal of the Chemical Society, Perkins Transactions 1, 11: 2719-2726
- 30 disclose 4',5'-unsubstituted acyl pyrrolidine compounds useful as reagents in the synthesis of 7-spiroamine quinolone and spiro[indan-2,2'-pyrrolidine] compounds respectively; no medical use was disclosed for the acyl pyrrolidine compounds.
- 35 WO2002/44168, WO96/33170 and EP505868A2 disclose 4',5'-unsubstituted acyl pyrrolidine compounds useful as intermediates in the synthesis of indolecarboxamide, N-aroylamino acid amide and N-acyl- α -amino acid derivatives respectively; no medical use was disclosed for the acyl pyrrolidine compounds.
- 40 De Caprariis et al, (1989) Journal of Heterocyclic Chemistry 26(4): 1023-1027 discloses 3 pyrrolidinedicarboxylic acid derivatives useful as intermediates in the synthesis of pyrrolo[1,4]benzodiazepine compounds; no medical use was disclosed for the pyrrolidinedicarboxylic acid derivatives.

Infection with HCV is a major cause of human liver disease throughout the world. In the US, an estimated 4.5 million Americans are chronically infected with HCV. Although only 30% of acute infections are symptomatic, greater than 85% of infected individuals develop chronic, persistent infection. Treatment costs for HCV infection have been estimated at \$5.46 billion for the US in 1997. Worldwide over 200 million people are estimated to be infected chronically. HCV infection is responsible for 40-60% of all chronic liver disease and 30% of all liver transplants. Chronic HCV infection accounts for 30% of all cirrhosis, end-stage liver disease, and liver cancer in the U.S. The CDC estimates that the number of deaths due to HCV will minimally increase to 38,000/year by the year 2010.

Due to the high degree of variability in the viral surface antigens, existence of multiple viral genotypes, and demonstrated specificity of immunity, the development of a successful vaccine in the near future is unlikely. Alpha-interferon (alone or in combination with ribavirin) has been widely used since its approval for treatment of chronic HCV infection. However, adverse side effects are commonly associated with this treatment: flu-like symptoms, leukopenia, thrombocytopenia, depression from interferon, as well as anemia induced by ribavirin (Lindsay, K.L. (1997) *Hepatology* 26 (suppl 1): 71S-77S). This therapy remains less effective against infections caused by HCV genotype 1 (which constitutes ~75% of all HCV infections in the developed markets) compared to infections caused by the other 5 major HCV genotypes. Unfortunately, only ~50-80% of the patients respond to this treatment (measured by a reduction in serum HCV RNA levels and normalization of liver enzymes) and, of those treated, 50-70% relapse within 6 months of cessation of treatment. Recently, with the introduction of pegylated interferon, both initial and sustained response rates have improved substantially, and combination treatment of Peg-IFN with ribavirin constitutes the gold standard for therapy. However, the side effects associated with combination therapy and the impaired response in patients with genotype 1 present opportunities for improvement in the management of this disease.

First identified by molecular cloning in 1989 (Choo, Q-L et al (1989) *Science* 244:359-362), hepatitis C virus (HCV) is now widely accepted as the most common causative agent of post-transfusion non A, non-B hepatitis (NANBH) (Kuo, G et al (1989) *Science* 244:362-364). Due to its genome structure and sequence homology, this virus was assigned as a new genus in the *Flaviviridae* family. Like the other members of the *Flaviviridae*, such as flaviviruses (e.g. yellow fever virus and Dengue virus types 1-4) and pestiviruses (e.g. bovine viral diarrhea virus, border disease virus, and classic swine fever virus) (Choo, Q-L et al (1989) *Science* 244:359-3; Miller, R.H. and R.H. Purcell (1990) *Proc. Natl. Acad. Sci. USA* 87:2057-2061), HCV is an enveloped virus containing a single strand RNA molecule of positive polarity. The HCV genome is approximately 9.6 kilobases (kb) with a long, highly conserved, noncapped 5' nontranslated region (NTR) of approximately 340 bases which functions as an internal ribosome entry site (IRES) (Wang

CY et al 'An RNA pseudoknot is an essential structural element of the internal ribosome entry site located within the hepatitis C virus 5' noncoding region' RNA- A Publication of the RNA Society. 1(5): 526-537, 1995 Jul.). This element is followed by a region which encodes a single long open reading frame (ORF) encoding a polypeptide of ~3000 amino acids comprising both the structural and nonstructural viral proteins.

Upon entry into the cytoplasm of the cell, this RNA is directly translated into a polypeptide of ~3000 amino acids comprising both the structural and nonstructural viral proteins. This large polypeptide is subsequently processed into the individual structural and nonstructural proteins by a combination of host and virally-encoded proteinases (Rice, C.M. (1996) in B.N. Fields, D.M.Knipe and P.M. Howley (eds) Virology 2nd Edition, p931-960; Raven Press, N.Y.). Following the termination codon at the end of the long ORF, there is a 3' NTR which roughly consists of three regions: an ~ 40 base region which is poorly conserved among various genotypes, a variable length poly(U)/polypyrimidine tract, and a highly conserved 98 base element also called the "3' X-tail" (Kolykhalov, A. et al (1996) J. Virology 70:3363-3371; Tanaka, T. et al (1995) Biochem Biophys. Res. Commun. 215:744-749; Tanaka, T. et al (1996) J. Virology 70:3307-3312; Yamada, N. et al (1996) Virology 223:255-261). The 3' NTR is predicted to form a stable secondary structure which is essential for HCV growth in chimps and is believed to function in the initiation and regulation of viral RNA replication.

The NS5B protein (591 amino acids, 65 kDa) of HCV (Behrens, S.E. et al (1996) EMBO J. 15:12-22), encodes an RNA-dependent RNA polymerase (RdRp) activity and contains canonical motifs present in other RNA viral polymerases. The NS5B protein is fairly well conserved both intra-typically (~95-98% amino acid (aa) identity across 1b isolates) and inter-typically (~85% aa identity between genotype 1a and 1b isolates). The essentiality of the HCV NS5B RdRp activity for the generation of infectious progeny virions has been formally proven in chimpanzees (A. A. Kolykhalov *et al.* (2000) Journal of Virology, 74(4), p.2046-2051). Thus, inhibition of NS5B RdRp activity (inhibition of RNA replication) is predicted to cure HCV infection.

Based on the foregoing, there exists a significant need to identify synthetic or biological compounds for their ability to inhibit HCV.

SUMMARY OF THE INVENTION

The present invention involves acyl pyrrolidine compounds represented hereinbelow, pharmaceutical compositions comprising such compounds and use of the compounds in treating viral infection, especially HCV infection.

DETAILED DESCRIPTION OF THE INVENTION

The present invention provides compounds of Formula (I) :

wherein:

A represents hydroxy;

5 D represents aryl or heteroaryl;

E represents hydrogen, C₁₋₆alkyl, aryl, heteroaryl or heterocyclyl;

10 G represents hydrogen or C₁₋₆alkyl optionally substituted by one or more substituents selected from halo, OR¹, SR¹, C(O)NR²R³, C(O)R⁴, CO₂R⁴, NR²R³, NHC(O)R⁴, NHCO₂R⁴, NHC(O)NR⁵R⁶, SO₂NR⁵R⁶, SO₂R⁴, nitro, cyano and heterocyclyl;

R¹ represents hydrogen, C₁₋₆alkyl, arylalkyl, or heteroarylalkyl;

15 R² and R³ are independently selected from hydrogen, C₁₋₆alkyl, aryl and heteroaryl; or R² and R³ together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group;

20 R⁴ is selected from the group consisting of C₁₋₆alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl;

R⁵ and R⁶ are independently selected from the group consisting of hydrogen, C₁₋₆alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl; or R⁵ and R⁶ together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group; and

25 J represents C₁₋₆alkyl, heterocyclylalkyl, arylalkyl or heteroarylalkyl;

and salts, solvates and esters thereof; provided that when A is esterified to form -OR where R is selected from straight or branched chain alkyl, aralkyl, aryloxyalkyl, or aryl, then R is other than *tert*-butyl; for use in medical therapy.

35 There is provided as a further aspect of the present invention a compound of Formula (I) or a physiologically acceptable salt, solvate or ester thereof for use in human or veterinary medical therapy, particularly in the treatment or prophylaxis of viral infection, particularly HCV infection.

It will be appreciated that reference herein to therapy and/or treatment includes, but is not limited to prevention, retardation, prophylaxis, therapy and cure of the disease. It will further be appreciated that references herein to treatment or prophylaxis of HCV infection includes treatment or prophylaxis of HCV-associated disease such as liver fibrosis, cirrhosis and hepatocellular carcinoma.

According to another aspect of the invention, there is provided the use of a compound of Formula (I) or a physiologically acceptable salt, solvate or ester thereof in the manufacture of a medicament for the treatment and/or prophylaxis of viral infection, particularly HCV infection.

In a further or alternative aspect there is provided a method for the treatment of a human or animal subject with viral infection, particularly HCV infection, which method comprises administering to said human or animal subject an effective amount of a compound of Formula (I) or a physiologically acceptable salt, solvate or ester thereof.

It will be appreciated that the compounds of the present invention may contain one or more asymmetric carbon atoms and may exist in racemic, diastereoisomeric, and optically active forms. All of these racemic compounds, enantiomers and diastereoisomers are contemplated to be within the scope of the present invention.

The present invention further provides novel compounds of Formula (I), represented by Formula (Ia) :

wherein:

A represents hydroxy;

D represents aryl or heteroaryl;

E represents hydrogen, C₁₋₆alkyl, aryl, heteroaryl or heterocyclyl;

G represents hydrogen or C₁₋₆alkyl optionally substituted by one or more substituents selected from halo, OR¹, SR¹, C(O)NR²R³, C(O)R⁴, CO₂R⁴, NR²R³, NHC(O)R⁴, NHCO₂R⁴, NHC(O)NR⁵R⁶, SO₂NR⁵R⁶, SO₂R⁴, nitro, cyano and heterocyclyl;

R¹ represents hydrogen, C₁₋₆alkyl, arylalkyl, or heteroarylalkyl;

R² and R³ are independently selected from hydrogen, C₁₋₆alkyl, aryl and heteroaryl; or R² and R³ together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group;

- 5 R⁴ is selected from the group consisting of C₁₋₆alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl;

- 10 R⁵ and R⁶ are independently selected from the group consisting of hydrogen, C₁₋₆alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl; or R⁵ and R⁶ together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group; and

J represents C₁₋₆alkyl, heterocyclalkyl, arylalkyl or heteroarylalkyl;

- 15 provided that i) E and G are not both hydrogen; and
 ii) the compound is other than
 4-ethenyl-1-(2-nitrobenzoyl)-2,2-pyrrolidinedicarboxylic acid, diethyl ester;
 1-(2-aminobenzoyl)-4-(1-hydroxyethyl)-2,2-pyrrolidinedicarboxylic acid, diethyl ester;
 4-(1-hydroxyethyl)-1-(2-nitrobenzoyl)-2,2-pyrrolidinedicarboxylic acid, diethyl ester;

- 20 and salts, solvates and esters thereof; provided that when A is esterified to form -OR where R is selected from straight or branched chain alkyl, aralkyl, aryloxyalkyl, or aryl; then R is other than *tert*-butyl.

- 25 Preferably, D represents optionally substituted phenyl; more preferably *tert*-butylphenyl optionally further substituted; especially preferred is *para-tert*-butylphenyl optionally further substituted, preferably *meta*-substituted, by halo, C₁₋₃alkyl or C₁₋₃alkoxy, especially bromo, chloro, methyl or methoxy; most preferably D is *meta*-methoxy-*para-tert*-butylphenyl (3-methoxy-4-*tert*-butylphenyl).

- 30 Preferably, E is selected from the group consisting of C₁₋₆alkyl, aryl and heteroaryl; more preferably E represents heteroaryl, preferably thiazolyl, pyridinyl and pyrazinyl; especially preferred are pyridin-2-yl, pyrazin-2-yl, 1,3-thiazol-2-yl, 5-methyl-1,3-thiazol-2-yl, 2-chloro-1,3-thiazol-5-yl, 2-methoxy-1,3-thiazol-5-yl or 1,3-thiazol-4-yl; most preferred is 1,3-thiazol-2-yl.

- 35 Preferably, G represents C₁₋₆alkyl optionally substituted by halo, OR¹, SR¹, SO₂R⁴ and cyano; more preferably G represents C₁₋₆alkyl optionally substituted by OR¹; especially preferably, G represents methyl optionally substituted by OR¹.

- 40 Preferably, R¹ represents hydrogen or C₁₋₃alkyl; more preferably, R¹ represents hydrogen, methyl, ethyl, propyl or prop-2-enyl, especially methyl or ethyl.

Preferably, J represents C₁₋₆alkyl, arylalkyl or heteroarylalkyl; more preferably isobutyl, prop-2-enyl, benzyl or pyridylmethyl, especially isobutyl.

5 In one aspect of the present invention, when D is phenyl substituted by at least two substituents independently selected from hydroxy, alkoxy, -CO₂H, -CO₂R⁴, or fluoro; G is hydrogen or C₁₋₆alkyl; and J is C₁₋₆alkyl; then E is aryl, heteroaryl or heterocyclyl.

10 As used herein unless otherwise specified, "alkyl" refers to an optionally substituted hydrocarbon group. The alkyl hydrocarbon group may be linear, branched or cyclic, saturated or unsaturated. Where the alkyl hydrocarbon group is cyclic, it will be understood that there will be a minimum of 3 carbon atoms in the group. Where the alkyl hydrocarbon group is unsaturated, it will be understood that there will be a minimum of 2 carbon atoms in the group and that the group may be, for example, an alkenyl or alkynyl group. Preferably, the group is saturated. Preferred alkyl moieties are C₁₋₄alkyl. Unless
15 otherwise stated, optional substituents include C₁₋₆alkyl, halo, OR¹, SR¹, C(O)NR²R³, C(O)R⁴, CO₂H, CO₂R⁴, NR²R³, NHC(O)R⁴, NHCO₂R⁴, NHC(O)NR⁵R⁶, SO₂NR⁵R⁶, SO₂R⁴, nitro, cyano, oxo, and heterocyclyl.

20 As used herein, "aryl" refers to an optionally substituted aromatic group with at least one ring having a conjugated pi-electron system; containing up to two conjugated or fused ring systems. "Aryl" includes carbocyclic aryl and biaryl groups, all of which may be optionally substituted. Preferred "aryl" moieties are unsubstituted, monosubstituted, disubstituted or trisubstituted phenyl. Preferred "aryl" substituents are selected from the group consisting of C₁₋₆alkyl, halo, OR¹, C(O)NR²R³, C(O)R⁴, CO₂H, CO₂R⁴, NR²R³, NHC(O)R⁴, NHCO₂R⁴,
25 NHC(O)NR⁵R⁶, SO₂NR⁵R⁶, SO₂R⁴, nitro, cyano, oxo, heterocyclyl, CF₃, and NO₂.

30 As used herein, "heteroaryl" refers to an optionally substituted, 5 or 6 membered, aromatic group comprising one to four heteroatoms selected from N, O and S, with at least one ring having a conjugated pi-electron system, containing up to two conjugated or fused ring systems. Preferred "heteroaryl" moieties are unsubstituted, monosubstituted, disubstituted or trisubstituted pyridyl and thiazolyl. Preferred "heteroaryl" substituents are selected from the group consisting of C₁₋₆alkyl, halo, OR¹, C(O)NR²R³, C(O)R⁴, CO₂H, CO₂R⁴, NR²R³, NHC(O)R⁴, NHCO₂R⁴, NHC(O)NR⁵R⁶, SO₂NR⁵R⁶, SO₂R⁴, nitro, cyano, oxo, heterocyclyl, CF₃, and NO₂.
35

40 As used herein, "heterocyclic" and "heterocyclyl" refer to an optionally substituted, 5 or 6 membered, saturated cyclic hydrocarbon group containing 1 or 2 heteroatoms selected from N, optionally substituted by hydrogen, C₁₋₆alkyl, C(O)R⁴, SO₂R⁴, aryl or heteroaryl; O; and S, optionally substituted by one or two oxygen atoms.

Preferred compounds of Formula (I) useful in the present invention are selected from the group consisting of:

- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 5 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-fluoromethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 2-Allyl-1-(3-bromo-4-*tert*-butylbenzoyl)-pyrrolidine-2-carboxylic acid;
- 10 2-Benzyl-1-(3-bromo-4-*tert*-butylbenzoyl)-pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-hydroxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-hydroxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 15 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-allyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-propyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 20 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-isopropenyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 25 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-isopropyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- (2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- (2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 30 (2S,4S,5R)-2-Isobutyl-1-(3-bromo-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- (2S,4S,5R)-2-Isobutyl-1-(3-chloro-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 35 (2S,4S,5R)-2-Isobutyl-1-(3-methyl-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2R,4R,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-

- thiazol-2-yl)-pyrrolidine-2-carboxylic acid;
rel-(2R,4R,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)-pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyrazin-2-yl)pyrrolidine-2-carboxylic acid;
5 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyrazin-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(5-methyl-1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
10 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(5-methyl-1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(2-chloro-1,3-thiazol-5-yl)pyrrolidine-2-carboxylic acid;

 10 and salts, solvates and esters, and individual enantiomers thereof where appropriate.

Preferred compounds of Formula (Ia) are selected from the group consisting of:

- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
 15 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-fluoromethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
 20 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-hydroxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-hydroxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
 25 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-allyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-propyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
 30 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-isopropenyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
 35 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-isopropyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-

- 2-yl)pyrrolidine-2-carboxylic acid;
 (2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
 (2S,4S,5R)-2-Isobutyl-1-(3-bromo-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)-
 5 pyrrolidine-2-carboxylic acid;
 (2S,4S,5R)-2-Isobutyl-1-(3-chloro-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)-
 pyrrolidine-2-carboxylic acid;
 (2S,4S,5R)-2-Isobutyl-1-(3-methyl-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
 10 *rel*-(2R,4R,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)-pyrrolidine-2-carboxylic acid;
rel-(2R,4R,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)-pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyrazin-
 15 2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyrazin-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(5-methyl-1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
 20 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(5-methyl-1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(2-chloro-1,3-thiazol-5-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(2-methoxy-1,3-thiazol-5-yl)pyrrolidine-2-carboxylic acid;
 25 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-((methylthio)methyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-((methanesulfonyl)methyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
 30 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1,1-difluoroethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1-hydroxy-1-methylethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2R,4S,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)-pyrrolidine-2-carboxylic acid;
 35 *rel*-(2R,4S,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)-pyrrolidine-2-carboxylic acid;

- rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyridin-2-yl)pyrrolidine-2-carboxylic acid;
- (2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1-hydroxy-1-methylethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 5 (2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1-hydroxyethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-4-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-allyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 10 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-propyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-cyanomethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 15 (2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1-hydroxy-1-methylethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyrid-2-yl))pyrrolidine-2-carboxylic acid;
- 20

and salts, solvates and esters, and individual enantiomers thereof where appropriate.

- Also included in the present invention are pharmaceutically acceptable salt complexes.
- 25 The present invention also covers the physiologically acceptable salts of the compounds of formula (I). Suitable physiologically acceptable salts of the compounds of formula (I) include acid salts, for example sodium, potassium, calcium, magnesium and tetraalkylammonium and the like, or mono- or di- basic salts with the appropriate acid for example organic carboxylic acids such as acetic, lactic, tartaric, malic, isethionic, lactobionic and succinic acids; organic sulfonic acids such as methanesulfonic,
- 30 ethanesulfonic, benzenesulfonic and p-toluenesulfonic acids and inorganic acids such as hydrochloric, sulfuric, phosphoric and sulfamic acids and the like.

- The present invention also relates to solvates of the compounds of Formula (I), for example hydrates.
- 35

The present invention also relates to pharmaceutically acceptable esters of the compounds of Formula (I) and (Ia), for example carboxylic acid esters -COOR, in which R is selected from straight or branched chain alkyl, for example n-propyl, n-butyl, alkoxyalkyl

(e.g. methoxymethyl), aralkyl (e.g. benzyl), aryloxyalkyl (e.g. phenoxymethyl), aryl (e.g. phenyl optionally substituted by halogen, C₁₋₄alkyl or C₁₋₄alkoxy or amino). Unless otherwise specified, any alkyl moiety present in such esters preferably contains 1 to 18 carbon atoms, particularly 1 to 4 carbon atoms. Any aryl moiety present in such esters preferably comprises a phenyl group.

It will further be appreciated that certain compounds of the present invention may exist in different tautomeric forms. All tautomers are contemplated to be within the scope of the present invention.

Compounds of Formula (I) and (Ia) in which A is hydroxy may be prepared from a compound of Formula (II)

in which A is a protected hydroxy group, for example an alkoxy, benzyloxy or silyloxy, for example tri-(C₁₋₄alkyl)-silyloxy group, and D, E, G and J are as defined above for Formula (I) or (Ia), by deprotection. Suitable protecting groups can be found, but are not restricted to, those found in T W Greene and P G M Wuts 'Protective Groups in Organic Synthesis', 3rd Ed (1999), J Wiley and Sons.

For example when A is *tert*-butoxy, and D, E, G and J are as defined above for Formula (I), by treatment with an appropriate acid, for example trifluoroacetic acid. Suitably, the reaction is carried out in a solvent, for example dichloromethane. Preferably, the temperature is in the range 0 to 50°C, more preferably 20 to 30°C.

For example when A is benzyloxy, and D, E, G and J are as defined above for Formula (I), by hydrogenolysis in the presence of a suitable catalyst for example palladium-on-carbon. Suitably, the reaction is carried out in a solvent, for example ethanol. Preferably, the temperature is in the range 0 to 50°C.

For example when A is allyloxy, and D, E, G and J are as defined above for Formula (I), by treatment with a suitable catalyst for example tetrakis(triphenylphosphine)palladium(0) and a suitable proton source, for example phenylsilane. The reaction is carried out in a suitable solvent, for example dichloromethane.

For example when A is tri(methyl)silyloxy, and D, E, G and J are as defined above for Formula (I), by treatment with a suitable fluoride source for example tetrabutylammonium fluoride. The reaction is carried out in a suitable solvent, for example tetrahydrofuran.

Compounds of Formula (I) and (Ia) in which A is hydroxy or a protected form thereof may also be prepared by reaction of a compound of Formula (III)

in which A, E, G, and J are as defined above for Formula (I); with a suitable acylating agent, for example D-C(O)-hal, wherein hal is a halo atom, preferably chloro or bromo, and D is as defined above for Formula (I). Preferably the reaction is carried out in a suitable solvent, for example dichloromethane, in the presence of a suitable base, for example triethylamine and thereafter removing any protecting group. Suitable protecting groups can be found, but are not restricted to, those found in T W Greene and P G M Wuts 'Protective Groups in Organic Synthesis', 3rd Ed (1999), J Wiley and Sons.

- 10 Compounds of Formula (I) or (II) in which G represents optionally substituted alkyl, may be prepared by appropriate manipulation of a compound of Formula (IIa)

in which A is hydroxy or an alkoxy, benzyloxy or tri-(C₁₋₄alkyl)-silyloxy group, D, E and J are as defined above for Formula (I), and L represents CO₂Y or COY wherein Y represents hydrogen or alkyl.

- 15 For example, a compound of Formula (II) in which G represents hydroxyalkyl may be prepared by reduction of a compound of Formula (IIa) in which L represents CO₂Y or COY and Y represents hydrogen or alkyl, using a suitable reducing agent, for example lithium borohydride, sodium borohydride, borane/dimethyl sulfide complex or lithium aluminium hydride, in a suitable solvent for example tetrahydrofuran.

- 20 For example, a compound of formula (II) in which G represents hydroxyalkyl may also be prepared by reaction of a compound of formula (IIa) in which L represents CO₂Y or COY and Y represents hydrogen or alkyl, with a suitable organometallic reagent, for example methylmagnesium bromide or methyl lithium, in a suitable solvent, for example tetrahydrofuran.

- 25 For example, a compound of formula (II) in which G represents difluoroalkyl may be prepared by reaction of a compound of formula (IIa) in which L represents COY and Y represents alkyl, with a suitable fluorinating agent, for example diethylaminosulfur trifluoride, in a suitable solvent, for example dichloromethane.

- 30 For example, a compound of formula (II) in which G represents alkenyl may be prepared by treatment of a compound of formula (IIa) in which L represents COY and Y represents hydrogen or alkyl, with a phosphonium salt, for example methyltriphenylphosphonium bromide, in the presence of a base, for example lithium bis(trimethylsilyl)amide.

In a further aspect, a compound of Formula (II) may be prepared by appropriate manipulation of another compound of Formula (II). For example, a compound of Formula (II) in which G represents hydroxyalkyl may be converted into a compound of Formula (II) in which G represents optionally substituted alkyl, for example alkyl, haloalkyl or alkoxyalkyl.

For example, a compound of Formula (II) in which G represents alkoxyalkyl may be prepared by alkylation of a compound of formula (II) in which G represents hydroxyalkyl using a suitable base for example sodium hydride and a suitable alkylating agent such as an alkyl iodide, for example methylating using methyl iodide or ethylating using ethyl iodide. Preferably the reaction is carried out in a suitable solvent, for example dimethylformamide.

For example, a compound of Formula (II) in which G represents haloalkyl may be prepared by halogenation of a compound of Formula (II) in which G represents hydroxyalkyl using a suitable halogenating agent, for example hydroxymethyl may be converted into fluoromethyl using a suitable fluorinating agent, for example diethylaminosulfur trifluoride, in a suitable solvent, for example dichloromethane.

For example, a compound of Formula (II) in which G represents cyanomethyl may be prepared by reacting a compound of Formula (II) in which G represents hydroxymethyl with, for example trifluoromethanesulfonic anhydride, and subsequently treating the product with a nucleophile, for example a cyanide salt such as tetrabutylammonium cyanide. A compound of Formula (II) in which G represents C₁₋₄alkylthiomethyl can similarly be prepared using C₁₋₄alkylthiolate as the nucleophile.

For example, a compound of Formula (II) in which G represents C₁₋₄alkylsulfonylmethyl may be prepared by oxidising a compound of Formula (II) in which G represents C₁₋₄alkylthiomethyl, using for example 3-chloroperbenzoic acid, in a suitable solvent, for example dichloromethane.

For example, a compound of Formula (II) in which G represents alkyl may be prepared by deoxygenation of a compound of formula (II) in which G represents hydroxyalkyl. The deoxygenation is suitably carried out in a two step process in which:

Step(i) A compound of formula (II) in which G represents hydroxyalkyl is converted into a thionocarbonate by treatment with a suitable chloroformate for example 4-fluorophenyl thionochloroformate. Preferably the reaction is carried out in a suitable solvent, for example dichloromethane, in the presence of a suitable base catalyst, for example 4-(N,N-dimethylamino)pyridine. Step(ii) The thionocarbonate from step(i) is treated with a suitable radical initiator, for example AIBN, and a suitable proton source, such as tris(trimethylsilyl)silane, in a suitable solvent, for example dioxan. Preferably, the temperature is in the range 80 to 120°C.

For example, a compound of Formula (II) in which G represents an unsaturated alkyl group may be converted into a compound of Formula (II) in which G represents a saturated alkyl group by hydrogenation in the presence of a suitable catalyst, for example palladium-on-carbon.

For example, a compound of Formula (II) in which G represents alkenyloxyalkyl or

substituted alkenyloxyalkyl may be converted into a compound of Formula (II) in which G represents alkyloxyalkyl or substituted alkyloxyalkyl by hydrogenation in the presence of a suitable catalyst, for example palladium-on-carbon. For example, allyloxyalkyl or substituted allyloxyalkyl may be converted into propyloxyalkyl or substituted propyloxyalkyl.

For example, a compound of Formula (II) in which E represents 2-chloro-1,3-thiazol-5-yl may be converted into a compound of Formula (II) in which E represents 2-alkoxy-1,3-thiazol-5-yl by heating with a suitable base, for example sodium hydroxide, and a suitable source of alkoxide, for example 2-methoxy-1,3-thiazol-5-yl may be prepared using sodium hydroxide and methanol.

A compound of Formula (IIa) in which L represents CO_2Y wherein Y represents hydrogen may be prepared from a compound of Formula (IIa) in which L represents CO_2Y wherein Y represents alkyl. For example, a compound of Formula (IIa) in which L represents CO_2Me may be converted into a compound of Formula (IIa) in which L represents CO_2H by hydrolysis, for example base catalysed hydrolysis using a suitable base such as sodium methoxide in a suitable solvent such as methanol.

A compound of Formula (IIa) in which L represents CO_2Y or COY wherein Y represents hydrogen or alkyl may be prepared from a compound of Formula (IIIa).

in which L represents CO_2Y or COY wherein Y represents hydrogen or alkyl, and A, E, and J are as defined above for Formula (I); with a suitable acylating agent, for example D-C(O)-hal , wherein hal is a halo atom, preferably chloro or bromo, and D is as defined above for Formula (I). Preferably the reaction is carried out in a suitable solvent, for example dichloromethane, in the presence of a suitable base, for example triethylamine.

A compound of Formula (IIa) in which A is hydroxy, may be converted to a compound of Formula (IIa) in which A is an alkoxy, benzyloxy or silyloxy group by standard hydroxy protecting techniques. Similarly, a compound of Formula (IIa) in which A is an alkoxy, benzyloxy or silyloxy group, may be converted to a compound of Formula (IIa) in which A is hydroxy by standard deprotecting techniques. Suitable protecting groups can be found, but are not restricted to, those found in T W Greene and P G M Wuts 'Protective Groups in Organic Synthesis', 3rd Ed (1999), J Wiley and Sons.

A compound of Formula (IIIa) may be prepared by reaction of a compound of Formula (IV)

in which E and J are as defined above for Formula (I) and A is as defined above for Formula (II) with a compound of Formula (V)

- 5 wherein L represents CO₂Y or COY wherein Y represents hydrogen or alkyl. Preferably, the reaction is carried out in a suitable solvent, for example THF or acetonitrile, optionally in the presence of a Lewis acid catalyst, such as lithium bromide or silver acetate, and a base, such as triethylamine, 1,8-diazabicyclo[5,4,0]undec-7-ene (DBU) or tetramethyl guanidine. Alternatively, the reaction is carried out in a suitable solvent, for example THF
- 10 or acetonitrile, in the presence of an acid, such as acetic acid, or the reaction may be carried out by heating compounds of Formula (IV) and Formula (V) in a suitable solvent, for example toluene, xylene or acetonitrile in the absence of a catalyst.

- 15 Compounds of Formula (III) in which G represents optionally substituted alkyl may be prepared by appropriate manipulation of a compound of Formula (IIIa) after first protecting the N-atom of the pyrrolidine ring with a suitable N-protecting group, for example benzyloxycarbonyl (CBZ) or *t*-butoxycarbonyl. For example, a compound of Formula (III) in which G represents hydroxyalkyl may be prepared by reduction of a compound of Formula (IIIa) in which L represents CO₂Y and Y represents alkyl, using a suitable
- 20 reducing agent, for example lithium borohydride or sodium borohydride, in a suitable solvent for example tetrahydrofuran. Deprotection of the N-atom by standard procedures results in the compound of Formula (III). For example, when the N-protecting group is CBZ, deprotection may be achieved by catalytic hydrogenolysis. For example, when the N-protecting group is *t*-butoxycarbonyl, deprotection may be achieved by treatment with a
- 25 suitable acid, for example trifluoroacetic acid.

- 30 In a similar manner to that described above in relation to compounds of Formula (II), a compound of Formula (III), in which G represents hydroxyalkyl and the N-atom is protected, may be converted into a compound of Formula (III) in which G represents optionally substituted alkyl, for example alkyl, haloalkyl or alkoxyalkyl and the N-atom is protected. Deprotection of the N-atom by standard procedures results in the new compound of Formula (III).

Compounds of Formula (IV) May be prepared by reaction of a compound of Formula (VI)

in which J is as defined above for Formula (I) and A is as defined above for Formula (II) with a compound of Formula E-CHO in the presence of a suitable base, for example triethylamine, in a suitable solvent, for example dichloromethane.

- 5 Compounds of Formula (VI) and E-CHO are known in the art or may be prepared by standard literature procedures.

10 Compounds of Formula (I) in which A is an ester may be prepared by esterification of a compound of Formula (I) in which A is hydroxy by standard literature procedures for esterification.

It will be appreciated that compounds of Formula (I), (Ia), (II), (IIa), (III) and/or (IIIa) which exist as diastereoisomers may optionally be separated by techniques well known in the art, for example by column chromatography.

15 It will also be appreciated that the present invention provides a method for the interconversion of C(4)-epimers of a compound of formula (IIa) or (IIIa) in which L represents CO₂Y or COY wherein Y represents hydrogen or alkyl, and A, E, and J are as defined above for formula (I). For example the rel-(2S, 4S, 5R)-diastereoisomer of a
20 compound of formula (IIa) and/or (IIIa) may be converted into the rel-(2S, 4R, 5R)-diastereoisomer and, similarly, the rel-(2R, 4S, 5R)-diastereoisomer of a compound of formula (IIa) and/or (IIIa) may be converted into the rel-(2R, 4R, 5R)-diastereoisomer where appropriate. Such epimerisation of these rel-(4S, 5R)-diastereoisomers into the
25 corresponding rel-(4R, 5R)-diastereoisomers may be accomplished by treatment of a compound of formula (IIa) and/or (IIIa) with a suitable base, in the presence of a suitable solvent. For example the conversion of the rel-(4S, 5R)-diastereoisomer of a compound of Formula (IIa) when L represents CO₂Me into the rel-(4R, 5R)-diastereoisomer is accomplished by treatment of the rel-(4S, 5R)-diastereoisomer with a suitable base, such as sodium methoxide, in the presence of a suitable solvent, such as methanol.

30 It will be appreciated that racemic compounds of Formula (I), (Ia), (II), (IIa), (III) and/or (IIIa) may be optionally resolved into their individual enantiomers. Such resolutions may conveniently be accomplished by standard methods known in the art. For example, a racemic compound of Formula (I), (Ia), (II), (IIa), (III) and/or (IIIa) may be resolved by
35 chiral preparative HPLC. Alternatively, racemic compounds of Formula (I), (Ia), (II), (IIa), (III) and/or (IIIa) which contain an appropriate acidic or basic group, such as a carboxylic acid group or amine group may be resolved by standard diastereoisomeric salt formation with a chiral base or acid reagent respectively as appropriate. Such techniques are well established in the art. For example, a racemic compound of Formula (IIIa) where L is
40 CO₂Me or C(O)Me may be resolved by treatment with a chiral acid such as (R)-(-)-1,1'-binaphthyl-2,2'-diyl-hydrogen phosphate.

It will also be appreciated that individual enantiomeric compounds of Formula (I), (Ia), (II),

(IIa), (III) and (IIIa) may be prepared by general methods of asymmetric synthesis using, where appropriate, chiral auxiliaries or chiral catalytic reagents and additionally performing any suitable functional group interconversion step as hereinbefore described, including the addition or removal of any such chiral auxiliary. Such general methods of asymmetric synthesis are well known in the art and include, but are not restricted to, those described in "Asymmetric Synthesis," Academic Press, 1984 and/or "Chiral Auxiliaries and Ligands in Asymmetric Synthesis", Wiley, 1995. For example, suitable general chiral auxiliaries include chiral alcohols such as menthol or 1-phenylethanol; chiral oxazolidinones such as 4-benzyloxazolidin-2-one or 4-isopropylloxazolidin-2-one; or chiral amines such as 1-phenylethylamine or 2-amino-2-phenylethanol. Suitable general chiral catalytic reagents include chiral bases such as quinine or chinchonidine or chiral complexing agents such as chiral bis(oxazoline) (BOX) ligands and derivatives. All of these chiral auxiliaries or chiral catalytic reagents are well described in the art. Illustrative examples of the preparation of chiral pyrrolidines by asymmetric synthesis using chiral auxiliaries or chiral catalytic reagents include, but are not limited to, those described in *Angew. Chem. Int. Ed.*, (2002), 41: 4236; *Tetrahedron: Asymm.*, (2001), 12: 1977; *Tetrahedron: Asymm.*, (2002), 13: 2099; *J. Am. Chem. Soc.*, (2002), 124: 13400 and *Chem. Rev.*, (1998), 98: 863.

In a particular aspect, a chiral pyrrolidine compound of Formula (IIIb)

in which L^1 represents CO_2Y or CO_2Y^1 wherein Y represents hydrogen or alkyl, Y^1 represents a chiral auxiliary, and A , E , and J are as defined above for Formula (I), and $*$ denotes an enantioenriched chiral centre can be prepared by reaction of a compound of Formula (IV), as hereinbefore defined, with a compound of Formula (Va)

in which L^1 represents a chiral ester group CO_2Y^1 wherein Y^1 represents a chiral auxiliary and thereafter optionally carrying out any conversion of CO_2Y^1 into CO_2Y by standard methods for removal of chiral auxiliaries. Such chiral ester CO_2Y^1 may be derived from a chiral alcohol Y^1OH , for example menthol, by standard esterification techniques. Preferably, the reaction of a compound of Formula (IV) with a compound of Formula (Va) is carried out in a suitable solvent, for example THF or acetonitrile, optionally in the presence of a Lewis acid catalyst, such as lithium bromide or silver acetate, and a base, such as triethylamine, 1,8-diazabicyclo[5,4,0]undec-7-ene (DBU) or tetramethyl guanidine. Alternatively, the reaction is carried out in a suitable solvent, for example THF or

acetonitrile, in the presence of an acid, such as acetic acid, or the reaction may be carried out by heating compounds of Formula (IV) and (Va) in a suitable solvent, for example toluene, xylene or acetonitrile in the absence of a catalyst. The preparation of compounds analogous to those of Formula (IIIb) and (Va) is described in *Tetrahedron: Asymm.*, (1995), 6: 2475.

Optionally, the major chiral diastereoisomer of Formula (IIIb) arising from such an asymmetric reaction may be further enantioenriched by conventional purification techniques well known in the art, for example by chromatography, or by fractional crystallisation. A favourable crystallisation method is the fractional crystallisation of a salt of the major chiral diastereoisomer, for example the hydrochloride salt. The hydrochloride salt of a compound of Formula (IIIb) may be prepared by treating a compound of Formula (IIIb) with anhydrous hydrogen chloride in a suitable solvent, for example diethyl ether. Preferably the reaction is carried out at a temperature in the range -10 to 10°C .

Optional removal of a chiral auxiliary from a group in which L^1 represents CO_2Y^1 to afford a group in which L^1 represents CO_2Y is readily accomplished by standard methods, for example treatment with a hydrolytic reagent such as sodium hydroxide or an alkoxide such as sodium methoxide as appropriate, in a suitable solvent such as methanol

Optionally, a chiral compound of Formula (IIIb) may be converted into a chiral compound of Formula (III) in which G represents hydroxyalkyl, and A, E, and J are as defined above for Formula (I) by treatment with suitable reagents for accomplishing the functional group interconversion of the group L^1 into group G. For example a compound of Formula (IIIb) in which L^1 represents CO_2Y^1 and Y^1 is as defined above may be treated with a suitable reducing agent, for example lithium aluminium hydride, in a suitable solvent, for example tetrahydrofuran.

Optionally, a chiral compound of Formula (IIIb) may be converted into a chiral compound of Formula (II) in which G represents hydroxyalkyl, by first acylating the pyrrolidine nitrogen atom as described above for the transformation of a compound of Formula (IIIa) into a compound of Formula (IIa) and then subsequently by treatment with suitable reagents for accomplishing the functional group interconversion of the group L^1 into group G. For example a compound of Formula (IIIb) in which L^1 represents CO_2Y^1 and Y^1 is as defined above may be treated with a suitable reducing agent, for example lithium aluminium hydride, in a suitable solvent, for example tetrahydrofuran.

It will be appreciated that, with suitable additional conversion steps as described above, chiral compounds of Formula (I) and/or (Ia) may be prepared from chiral compounds of Formula (II) or (III).

It will be appreciated that any unsaturated alkyl substituent may be converted into a saturated alkyl substituent by reduction, for example by hydrogenation over a suitable catalyst such as palladium-on-carbon, provided any other susceptible substituents are

first protected and subsequently deprotected.

With appropriate manipulation and protection of any chemical functionality, synthesis of compounds of Formula (I) is accomplished by methods analogous to those above and to those described in the Experimental section. Suitable protecting groups can be found, but are not restricted to, those found in T W Greene and P G M Wuts 'Protective Groups in Organic Synthesis', 3rd Ed (1999), J Wiley and Sons.

EXAMPLES

Intermediate 1

2-[N-(1,3-Thiazol-2-ylmethylene)amino]-4-methylpentanoic acid, *tert*-butyl ester

A stirred mixture of 2-amino-4-methyl-pentanoic acid *tert*-butyl ester, hydrochloride salt (5.00g, 22.34 mmol), 1,3-thiazole-2-carboxaldehyde (2.53g, 22.34 mmol) and triethylamine (3.10 mL, 22.3 mmol) in dichloromethane (60 mL) was heated under reflux under nitrogen for 19 hours. The reaction mixture was allowed to cool to room temperature, washed twice with water, dried over Na₂SO₄ and evaporated to give the title compound as an oil.

¹H NMR (CDCl₃): δ 8.46 (s, 1H), 7.94 (d, 1H), 7.44 (d, 1H), 4.07 (dd, 1H), 1.89-1.74 (m, 2H), 1.64-1.52 (m, 1H), 1.48 (s, 9H), 0.96 (d, 3H) and 0.90 (d, 3H).

Intermediate 2

rel-(2S,4S,5R)-2-Isobutyl-5-(1,3-thiazol-2-yl)pyrrolidine-2,4-dicarboxylic acid, 2-*tert*-butyl ester, 4-methyl ester

Racemic;
Relative stereochemistry shown

To a cooled (0°C) stirred solution of Intermediate 1 (0.53 g, 1.88 mmol) in anhydrous THF (3 mL) under nitrogen, was added methyl acrylate (254 uL, 2.83 mmol) followed by lithium bromide (0.33 g, 3.80 mmol) and triethylamine (390 uL, 2.82 mmol). The reaction was stirred in a cooling bath for 5 min. and then at ambient temperature overnight. Aqueous ammonium chloride (15 mL) was added and the resulting mixture was extracted with ethyl acetate (20 mL). The extracts were combined and washed with water and brine then dried (MgSO₄). The solvent was evaporated *in vacuo* to give the title compound as a solid.

MS found (electrospray): (M+H)⁺ = 369.

Intermediate 3

***rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-5-(1,3-thiazol-2-yl)-pyrrolidine-2,4-dicarboxylic acid, 2-*tert*-butyl ester, 4-methyl ester**

Racemic;
Relative stereochemistry shown

5

To a stirred solution of 3-methoxy-4-*tert*-butylbenzoyl chloride¹ (3.36 g, 37 mmol) in anhydrous dichloromethane (50 mL) was added Intermediate 2 (4 g, 24 mmol,) and triethylamine (2.27 mL, 37 mmol). This mixture was stirred for 6 hours under nitrogen and was then diluted with dichloromethane and washed with water. The organic phase was dried (MgSO₄) and evaporated *in vacuo*. The residue was purified by crystallisation from dichloromethane and washing with diethyl ether to provide the title compound as a solid.

Racemic;
Relative stereochemistry shown

To a solution of Intermediate 4 (0.14 g) in anhydrous DMF (5 mL) was added sodium hydride (60% dispersion in mineral oil, 16 mg). When gas evolution had subsided iodoethane (0.084 mL) was added. The mixture was stirred at ambient temperature under an atmosphere of nitrogen for 18 h. Further quantities of sodium hydride dispersion (17 mg) and iodoethane (0.084 mL) were added and the mixture was stirred for a further 24h. Methanol (10 mL) was added and the mixture was stirred for 10 min. Volatiles were removed and the residue was dissolved in ethyl acetate (15 mL), washed with water (15 mL) and then dried (MgSO₄). Removal of solvent gave the crude product which was purified by silica gel chromatography eluting with 5:1 (v/v) cyclohexane/ethyl acetate) to give the title compound as an oil.

- 10 A solution of Intermediate 19 (1.00 g) in dry THF (50 mL) was stirred under nitrogen at -78°C. 1.0M lithium aluminium hydride solution in THF (1.8 mL) was added dropwise. The resulting mixture was stirred and allowed to warm to -40°C over 2h. The mixture was quenched with 1M potassium carbonate solution (25 mL) and extracted with ethyl acetate (2 x 50 mL). Extracts were washed with water, then brine and dried (MgSO₄). Removal of solvent gave the crude product. This was dissolved in THF (30 mL), cooled under nitrogen to -78°C and treated dropwise with stirring with 1M solution of lithium aluminium hydride in THF (1.0 mL). The mixture was allowed to warm to -20°C over 3h. The mixture was quenched with 1M potassium carbonate solution and extracted with ethyl acetate (2 x 50 mL). Extracts were washed with water, then brine and dried (MgSO₄).
- 15
- 20 Removal of solvent gave Enantiomer A of the title compound.
 MS calcd for (C₂₉H₄₂N₂O₅S + H)⁺: 531
 MS found (electrospray): (M+H)⁺ = 531
 The absolute stereochemistry of this compound was determined by reference to Intermediates 22 and 92. This compound was spectroscopically identical to that described as Intermediate 92.

Racemic;
Relative stereochemistry shown

To a solution of Intermediate 67 (1.29g) in methanol (15 mL) was added 25% w/v

methanolic sodium methoxide (0.51 mL). The mixture was stirred at room temperature overnight. Solvent was removed and the residue was purified by silica chromatography eluting with cyclohexane-ethyl acetate (4:1 v/v) to give the title compound.

MS calcd for $(C_{32}H_{44}N_2O_6 + H)^+$: 553

5 MS found (electrospray): $(M+H)^+ = 553$

Intermediate 87

***rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-hydroxymethyl-5-(pyridin-2-yl)pyrrolidine-2-carboxylic acid, 2-*tert*-butyl ester**

Racemic;
Relative stereochemistry shown

10

To a solution of Intermediate 86 (758 mg) in tetrahydrofuran (10 mL) was added 2M lithium borohydride solution in tetrahydrofuran (0.98 mL). The mixture was stirred at room temperature for 18h. Solvent was removed and the residue was partitioned between ethyl acetate and potassium carbonate solution. The organic layer was collected and the aqueous layer further extracted with ethyl acetate. The combined organic solutions were dried (Na_2SO_4). Solvent was removed and the residue was purified by silica gel chromatography eluting with cyclohexane-ethyl acetate (gradient elution from 100:0 v/v to 3:2 v/v) to give the title compound.

Intermediate 89

(2S,4S,5R)-2-(Isobutyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2,4-dicarboxylic acid, 2-(tert-butyl) ester, 4-[(1R,2S,5R)-5-methyl-2-(isopropyl)cyclohexyl] ester

Diastereoisomer ratio 85:15 (chiral hplc)
Major diastereoisomer shown
Absolute stereochemistry shown

5 L-menthyl acrylate (11.24 g, 53.5 mmol) was added to a solution of (Intermediate 1; 13.73 g, 48.6 mmol) in anhydrous THF (165 mL). Lithium bromide (8.43 g, 97.1 mmol) was added and the mixture stirred for 5 minutes prior to the dropwise addition of triethylamine (10.11 mL, 72.9 mmol). The resulting mixture was stirred at room temperature under nitrogen for 18 hours then quenched with saturated aqueous ammonium chloride solution, extracted into ethyl acetate and washed with brine, dried (Na₂SO₄) and evaporated to afford the title compound as a dark red oil, a mixture of diastereoisomers at the pyrrolidine C(4)-centre. The absolute stereochemistry of the major diastereoisomer was confirmed by reference to Intermediate 90 (below).

MS calcd. for (C₂₇H₄₄N₂O₄S + H)⁺: 493.

Intermediate 90

20 **(2S,4S,5R)-2-(Isobutyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2,4-dicarboxylic acid, 2-(tert-butyl) ester, 4-[(1R,2S,5R)-5-methyl-2-(isopropyl)cyclohexyl] ester hydrochloride**

Chiral;
Absolute stereochemistry shown
Stereochemistry determined by X-ray crystallography

25 Anhydrous hydrogen chloride (1M in diethyl ether) (75.9 mL, 75.9 mmol) was added dropwise to a solution of Intermediate 89 (24.84 g, 50.4 mmol) in diethyl ether at 0°C. The solvent was removed under reduced pressure and the resulting solid was recrystallised from 2-propanol. The resulting solid was washed with diethyl ether and dried to give the title compound as a crystalline solid.

30 ¹H NMR (CD₃OD): δ 7.78 (d, 1H), 7.76 (d, 1H), 5.56 (d, 1H), 4.53 (m, 1H), 3.84 (dd, 1H), 3.42 (dd, 1H), 2.53 (dd, 1H), 2.11-2.01 (m, 2H), 1.85-1.70 (m, 2H), 1.69-1.60 (br m, 2H), 1.53 (s, 9H), 1.45-1.23 (br m, 3H), 1.07-0.95 (m, 1H), 1.03 (d, 3H), 1.00 (d, 3H), 0.89 (d, 3H), 0.83 (d, 3H), 0.80-0.72 (br m, 1H), 0.70 (d, 3H) 0.50 (dd, 1H).

The absolute stereochemistry of this compound was determined by X-ray crystallography

and shown to be (2S,4S,5R), as drawn.

Intermediate 91

(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2,4-dicarboxylic acid, 2-(*tert*-butyl) ester, 4-[(1R,2S,5R)-5-methyl-2-(isopropyl)cyclohexyl] ester

Triethylamine (6.16 mL, 44.4 mmol) was added dropwise to a solution of Intermediate 90; 11.75g, 22.20 mmol) and 4-*tert*-butyl-3-methoxybenzoyl chloride (7.57 g, 33.4 mmol) in anhydrous dichloromethane (190 mL). The reaction mixture was stirred at room temperature under nitrogen for 18 hours, washed with saturated aqueous sodium bicarbonate solution, dried (hydrophobic frit) and concentrated in vacuo. The crude product mixture was purified by chromatography on silica gel using toluene then cyclohexane-ethyl acetate (1:1 v/v) as eluent to afford the title compound as a gum.

MS calcd. for (C₃₉H₅₈N₂O₆S + H)⁺: 683.

MS found (electrospray): (M+H)⁺ = 683.

¹H NMR (CD₃OD): δ 7.42 (s, 1H), 7.28 (d, 1H), 6.86 (d, 1H), 6.51 (s, 1H), 5.85 (d, 1H), 4.39 (m, 1H), 3.92 (m, 1H), 3.67 (s, 3H), 3.06 (dd, 1H), 2.41 (dd, 1H), 2.26-2.11 (m, 2H), 2.09-1.90 (m, 1H), 1.89-1.74 (br, 1H), 1.66-1.52 (br, 2H), 1.47 (s, 9H), 1.35 (s, 9H), 1.38-1.11 (br, 4H), 1.08 (d, 6H), 1.06-0.89 (br, 1H), 0.86 (d, 3H), 0.82-0.67 (br, 1H), 0.76 (d, 3H), 0.66 (d, 3H), 0.51-0.35 (q, 1H).

Intermediate 92

(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(hydroxymethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid, *tert*-butyl ester

Lithium aluminiumhydride (1M in tetrahydrofuran) (0.22 mL, 0.22 mmol) was added dropwise over 1 minute to a solution of Intermediate 91 (0.15 g, 0.22 mmol) in anhydrous diethyl ether (3 mL) at room temperature under nitrogen. The reaction mixture was

quenched after 10 minutes by dropwise addition of 1.0 M aqueous potassium carbonate and extracted twice into ethyl acetate. The extracts were combined, washed with water, dried (Na_2SO_4) and evaporated to afford a gum. The crude product was purified by chromatography on silica gel using cyclohexane-ethyl acetate (2:1 v/v) as eluent to give the title compound.

MS calcd. for $(\text{C}_{29}\text{H}_{42}\text{N}_2\text{O}_5\text{S} + \text{H})^+$: 531.

MS found (electrospray): $(\text{M}+\text{H})^+ = 531$.

^1H NMR (CDCl_3): 7.57 (d, 1H), 7.27 (d, 1H), 7.09 (d, 1H), 6.69 (d, 1H), 6.53 (s, 1H), 5.64 (d, 1H), 3.59 (s, 3H), 3.43 (dd, 1H), 3.26-3.12 (br, 1H), 2.80 (t, 1H), 2.34 (dd, 1H), 2.22-1.82 (m, 4H), 1.59 (s, 9H), 1.52-1.30 (m, 1H), (s, 9H), 1.06 (m, 6H).

This compound was spectroscopically identical to that described in Intermediate 20.

Intermediate 93

Enantiomer A of *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(5-methyl-1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid, 2-*tert*-butyl ester

Chiral; Enantiomer A
Relative stereochemistry shown

Intermediate 51 was separated into enantiomers using chiral hplc on a Chiralpak AD column and eluting with heptane-isopropyl alcohol (95:5 v/v). The title compound was obtained as the first eluting enantiomer.

MS calcd for $(\text{C}_{31}\text{H}_{46}\text{N}_2\text{O}_5\text{S} + \text{H})^+$: 559

MS found (electrospray): $(\text{M}+\text{H})^+ = 559$

Example 1

Chiral;
Absolute stereochemistry as drawn

2-yl)pyrrolidine-2-carboxylic acid

Sodium hydride (60% dispersion in mineral oil; 0.061 g, 1.52 mmol) was added to a stirred solution of Intermediate 28 (0.48 g, 0.93 mmol) in anhydrous DMF (10 mL) at 0°C. The resulting mixture was stirred at 0°C for 30 minutes prior to the addition of iodoethane (0.37 mL, 4.65 mmol). The mixture was stirred at 5°C for 2 h, then evaporated to dryness. The residue was dissolved in trifluoroacetic acid (8 mL) and stirred at room temperature for 19 h. The trifluoroacetic acid was evaporated and the residue dissolved in ethyl acetate, washed with water, dried (Na_2SO_4) and evaporated. The crude product was purified by chromatography on silica gel using cyclohexane-ethyl acetate (gradient elution from 2:1 v/v to 3:2 v/v) as eluent and then crystallised from diethyl ether to afford the title compound, a solid.

MS calcd for $(C_{27}H_{38}N_2O_4S + H)^+$: 487

25 **Diastereoisomer 1 and diastereoisomer 2 of (2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1-hydroxyethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid**

Chiral;
Absolute stereochemistry shown for pyrrolidine ring
Separated diastereoisomers at the alcohol centre
Absolute stereochemistry of alcohol centre in Diastereoisomers 1 & 2 not known.

Sodium borohydride (0.025 g, 0.68 mmol) was added to a cold (0°C) solution of Intermediate 73 (0.065 g, 0.133 mmol) in anhydrous THF (5 mL) under nitrogen. The mixture was stirred at 0°C for 30 minutes, then at room temperature for 3 hours. The mixture was acidified (2M HCl) and extracted with ethyl acetate. The organic solution was dried (Na₂SO₄) and evaporated to afford a gummy solid. This was purified by repeated preparative HPLC on a C18 column using a two-solvent gradient elution with (A) water containing formic acid (0.1%) and (B) acetonitrile-water (95:5 v/v) containing formic acid (0.05%) as eluents to afford a mixture of diastereoisomers of the alcohol. Further HPLC purification on a Chiralpak AD column with heptane-ethanol (90:10 v/v) containing 0.1% trifluoroacetic acid as eluent afforded Diastereoisomer 1 (Example 37a), the earlier eluting diastereoisomer and, subsequently, Diastereoisomer 2 (Example 37b), the later eluting diastereoisomer.

Example 37a

MS calcd for (C₂₆H₃₆N₂O₅S+ H)⁺ : 489

MS calcd for $(C_{28}H_{38}N_2O_5 + H)^+$: 483

5 MS found (electrospray): $(M+H)^+ = 483$

1H NMR (CD_3OD): δ 8.42 (1H, d), 7.53 (1H, dt), 7.22 (1H, dd), 7.17 (1H, d), 6.98 (1H, d), 6.89 (1H, dd), 6.39 (1H, d), 5.17 (1H, d), 3.67 (3H, s), 3.44 (2H, m), 3.30 (3H, s), 2.69 (1H, m), 2.58 (1H, dd), 2.52 (1H, t), 2.35 (1H, dd), 2.10 (1H, dd), 1.92 (1H, m), 1.32 (9H, s), 1.18 (3H, d), 1.04 (3H, d).

10

The compounds according to the invention may be formulated for administration in any convenient way, and the invention therefore also includes within its scope pharmaceutical compositions for use in therapy, comprising a compound of formula (I) or a physiologically acceptable salt or solvate thereof in admixture with one or more physiologically acceptable diluents or carriers.

15

The compounds of the present invention can be administered by different routes including intravenous, intraperitoneal, subcutaneous, intramuscular, oral, topical, transdermal, or transmucosal administration. For systemic administration, oral administration is preferred. For oral administration, for example, the compounds can be formulated into conventional oral dosage forms such as capsules, tablets and liquid preparations such as syrups, elixirs and concentrated drops.

20

Alternatively, injection (parenteral administration) may be used, e.g., intramuscular, intravenous, intraperitoneal, and subcutaneous. For injection, the compounds of the invention are formulated in liquid solutions, preferably, in physiologically compatible buffers or solutions, such as saline solution, Hank's solution, or Ringer's solution. In addition, the compounds may be formulated in solid form and redissolved or suspended immediately prior to use. Lyophilized forms can also be produced.

25

Systemic administration can also be by transmucosal or transdermal means. For transmucosal or transdermal administration, penetrants appropriate to the barrier to be permeated are used in the formulation. Such penetrants are generally known in the art, and include, for example, for transmucosal administration, bile salts and fusidic acid derivatives. In addition, detergents may be used to facilitate permeation. Transmucosal

30

administration, for example, may be through nasal sprays, rectal suppositories, or vaginal suppositories.

5 For topical administration, the compounds of the invention can be formulated into ointments, salves, gels, or creams, as is generally known in the art.

10 The amounts of various compounds to be administered can be determined by standard procedures taking into account factors such as the compound (IC_{50}) potency, (EC_{50}) efficacy, and the biological half-life (of the compound), the age, size and weight of the patient, and the disease or disorder associated with the patient. The importance of these and other factors to be considered are known to those of ordinary skill in the art.

15 Amounts administered also depend on the routes of administration and the degree of oral bioavailability. For example, for compounds with low oral bioavailability, relatively higher doses will have to be administered. Oral administration is a preferred method of administration of the present compounds.

20 Preferably the composition is in unit dosage form. For oral application, for example, a tablet, or capsule may be administered, for nasal application, a metered aerosol dose may be administered, for transdermal application, a topical formulation or patch may be administered and for transmucosal delivery; a buccal patch may be administered. In each case, dosing is such that the patient may administer a single dose.

25 Each dosage unit for oral administration contains suitably from 0.01 to 500 mg/Kg, and preferably from 0.1 to 50 mg/Kg, of a compound of Formula (I) or a pharmaceutically acceptable salt thereof, calculated as the free base. The daily dosage for parenteral, nasal, oral inhalation, transmucosal or transdermal routes contains suitably from 0.01 mg to 100 mg/Kg, of a compound of Formula(I). A topical formulation contains suitably 0.01 to 5.0% of a compound of Formula (I). The active ingredient may be administered from 1
30 to 6 times per day, preferably once, sufficient to exhibit the desired activity, as is readily apparent to one skilled in the art.

35 Composition of Formula (I) and their pharmaceutically acceptable salts which are active when given orally can be formulated as syrups, tablets, capsules and lozenges. A syrup formulation will generally consist of a suspension or solution of the compound or salt in a liquid carrier for example, ethanol, peanut oil, olive oil, glycerine or water with a flavoring or coloring agent. Where the composition is in the form of a tablet, any pharmaceutical carrier routinely used for preparing solid formulations may be used. Examples of such carriers include magnesium stearate, terra alba, talc, gelatin, acacia, stearic acid, starch,
40 lactose and sucrose. Where the composition is in the form of a capsule, any routine encapsulation is suitable, for example using the aforementioned carriers in a hard gelatin capsule shell. Where the composition is in the form of a soft gelatin shell capsule any

pharmaceutical carrier routinely used for preparing dispersions or suspensions may be considered, for example aqueous gums, celluloses, silicates or oils, and are incorporated in a soft gelatin capsule shell.

5 Typical parenteral compositions consist of a solution or suspension of a compound or salt in a sterile aqueous or non-aqueous carrier optionally containing a parenterally acceptable oil, for example polyethylene glycol, polyvinylpyrrolidone, lecithin, arachis oil or sesame oil.

10 Typical compositions for inhalation are in the form of a solution, suspension or emulsion that may be administered as a dry powder or in the form of an aerosol using a conventional propellant such as dichlorodifluoromethane or trichlorofluoromethane.

15 A typical suppository formulation comprises a compound of Formula (I) or a pharmaceutically acceptable salt thereof which is active when administered in this way, with a binding and/or lubricating agent, for example polymeric glycols, gelatins, cocoa-butter or other low melting vegetable waxes or fats or their synthetic analogs.

20 Typical dermal and transdermal formulations comprise a conventional aqueous or non-aqueous vehicle, for example a cream, ointment, lotion or paste or are in the form of a medicated plaster, patch or membrane.

No unacceptable toxicological effects are expected when compounds of the present invention are administered in accordance with the present invention.

25

ASSAYS

The potential for compounds of the invention to inhibit NS5B wildtype HCV polymerase activity may be demonstrated, for example, using one of the following *in vitro* assays:

30 In Vitro Detection of inhibitors of HCV RNA-dependent RNA Polymerase Activity (A)

Incorporation of [³H]-UMP into RNA was followed by absorption of the RNA polymer onto a DEAE glass fibre filter. A synthetic template consisting of 16mer oligoU hybridised to polyA (10:1 w/w) was used as a homopolymer substrate.

35 Reaction Conditions were 22 μ M [³H]-UTP (0.75 Ci/mMol), 1 mM-Dithiothreitol, 3.2 mM-MgCl₂, 20 mM-Tris-HCl, pH7.0, 10 μ g/mL polyA-oligoU, and 90 mM-NaCl. Note that 50mM-NaCl is added with the enzyme.

40 HCV RNA Polymerase (Recombinant full-length NS5B (Lohmann et al, J. Virol. 71 (11), 1997, 8416 'Biochemical properties of hepatitis C virus NS5B RNA-dependent RNA polymerase and identification of amino acid sequence motifs essential for enzymatic activity') expressed in baculovirus and purified to homogeneity) was diluted to about 50 μ g

protein/mL (dependent on specific activity) in 50mM-Hepes, pH7.0, 0.5M-NaCl, 20%-Glycerol, 0.05%-Triton X-100, 5mM-Dithiothreitol, 0.1mM-EDTA.

5 5x Concentrated Buffer mix was prepared using 1M-Tris-HCl (pH7.0, 1mL), 1M-MgCl₂ (0.16mL), 1M-Dithiothreitol (0.05mL), 5M-NaCl (0.4mL), and Water (8.4mL), *Total* 10mL.

Substrate Mix was prepared using 5x Concentrated Buffer mix (12μL), [³H]-UTP (1 μCi/μL; 21.7μM, 1μL), 22 μM-UTP (100 μM, 13.2 μL), 10 μg/mL polyA-oligoU (100 μg/mL, 6μL), and Water (12.8 μL), *Total* 45μL.

10 The Assay was set up using Substrate Mix (45μL), compound (10μL), and Diluted Enzyme (added last to start reaction) (5μL), *Total* 60μL.

15 The reaction was performed in a U-bottomed, clear, 96-well plate. The reaction was mixed on a plate-shaker, after addition of the Enzyme, and incubated for 2h at 22°C. After this time, the reaction was stopped by addition of 25μL of 100mM-EDTA.

20 A DEAE Filtermat (Part No. 1205-405 from Pharmacia) was pre-washed in water and alcohol and dried. 2 x 20μL of the Stopped Assay Mix was spotted onto a square of the DEAE Filtermat. The DEAE Filtermat was washed for 2x 15min in SSC buffer (0.3M-NaCl, 30mM-Na Citrate) followed by 2x 2min in water and 1x 1min in alcohol. The Filtermat was dried and sealed in a bag together with 10mL of OptiScint HiSafe scintillation fluid. The radioactivity present on the filtermat was detected by scintillation counting on a Wallac 1205 Betaplate counter. After subtraction of background levels without enzyme, any reduction in the amount of radioactivity incorporated in the presence of a compound, compared to that in the absence, was taken as a measure of the level of inhibition. Ten concentrations of compounds were tested in two- or threefold dilutions. From the counts, percentage of inhibition at highest concentration tested or IC₅₀s for the compounds were calculated using Grafit3 or Grafit4 software packages.

30 **In Vitro Detection of inhibitors of HCV RNA-dependent RNA Polymerase Activity (B)**
Incorporation of [³³P]-GMP into RNA was followed by absorption of the biotin labelled RNA polymer by streptavidin containing SPA beads. A synthetic template consisting of biotinylated 13mer-oligoG hybridised to polyrC was used as a homopolymer substrate.

35 Reaction Conditions were 0.5 μM [³³P]-GTP (0.2 Ci/mMol), 1 mM Dithiothreitol, 20 mM MgCl₂, 5mM MnCl₂, 20 mM Tris-HCl, pH7.5, 1.6 μg/mL polyC/0.256 μM biotinylated oligoG13, 10% glycerol, 0.01% NP-40, 0.2 u/μL RNasin and 50 mM NaCl.

40 HCV RNA Polymerase (Recombinant full-length NS5B (Lohmann et al, J. Virol. 71 (11), 1997, 8416 'Biochemical properties of hepatitis C virus NS5B RNA-dependent RNA polymerase and identification of amino acid sequence motifs essential for enzymatic

activity') expressed in baculovirus and purified to homogeneity) was added to 10 nM final concentration.

5 5x concentrated assay buffer mix was prepared using 1M MnCl_2 (0.25 mL), glycerol (4mL), 10% NP-40 (0.025 mL) and Water (7.225 mL), *Total* 10 mL.

10 2x concentrated enzyme buffer contained 1M-Tris-HCl, pH7.5 (0.4 mL), 5M NaCl (0.2 mL), 1M- MgCl_2 (0.4 mL), glycerol (1 mL), 10% NP-40 (10 μL), 1M DTT (20 μL) and water (7.97 mL), *Total* 10 mL.

Substrate Mix was prepared using 5x Concentrated assay Buffer mix (4 μL), [^{33}P]-GTP (10 $\mu\text{Ci}/\mu\text{L}$, 0.02 μL), 25 μM GTP (0.4 μL), 0.4 $\mu\text{g}/\mu\text{L}$ RNasin (0.04 μL), 20 $\mu\text{g}/\text{mL}$ polyrC/biotinylated-oligorG (1.6 μL), and Water (3.94 μL), *Total* 10 μL .

15 Enzyme Mix was prepared by adding 1mg/ml full-length NS5B polymerase (1.5 μL) to 2.811mL 2x-concentrated enzyme buffer.

20 The Assay was set up using compound (1 μL), Substrate Mix (10 μL), and Enzyme Mix (added last to start reaction) (10 μL), *Total* 21 μL .

25 The reaction was performed in a U-bottomed, white, 96-well plate. The reaction was mixed on a plate-shaker, after addition of the Enzyme, and incubated for 1h at 22°C. After this time; the reaction was stopped by addition of 40 μL 1.875 mg/ml streptavidin SPA beads in 0.1 M EDTA. The beads were incubated with the reaction mixture for 1h at 22°C after which 120 μL 0.1 M EDTA in PBS was added. The plate was sealed, mixed centrifuged and incorporated radioactivity determined by counting in a Trilux (Wallac) or Topcount (Packard) Scintillation Counter.

30 After subtraction of background levels without enzyme, any reduction in the amount of radioactivity incorporated in the presence of a compound, compared to that in the absence, was taken as a measure of the level of inhibition. Ten concentrations of compounds were tested in three- or fivefold dilutions. From the counts, percentage of inhibition at highest concentration tested or IC_{50} s for the compounds were calculated using Grafit3 or Grafit4 software packages.

35 The exemplified compounds all had an IC_{50} of $<50\mu\text{M}$ in one of the above described assays. Accordingly, the compounds of the invention are of potential therapeutic benefit in the treatment and prophylaxis of HCV. Preferred compounds had an IC_{50} of $<5\mu\text{M}$.

40 The pharmaceutical compositions according to the invention may also be used in combination with other therapeutic agents, for example immune therapies (eg. interferon), therapeutic vaccines, antifibrotic agents, anti-inflammatory agents such as corticosteroids

or NSAIDs, bronchodilators such as beta-2 adrenergic agonists and xanthines (e.g. theophylline), mucolytic agents, anti-muscarinics, anti-leukotrienes, inhibitors of cell adhesion (e.g. ICAM antagonists), anti-oxidants (eg N-acetylcysteine), cytokine agonists, cytokine antagonists, lung surfactants and/or antimicrobial and anti-viral agents (eg ribavirin and amantidine). The compositions according to the invention may also be used in combination with gene replacement therapy.

The invention thus provides, in a further aspect, a combination comprising a compound of formula (I) or a physiologically acceptable salt or solvate thereof together with another therapeutically active agent.

The combinations referred to above may conveniently be presented for use in the form of a pharmaceutical formulation and thus pharmaceutical formulations comprising a combination as defined above together with a pharmaceutically acceptable carrier thereof represent a further aspect of the invention.

The individual components of such combinations may be administered either sequentially or simultaneously in separate or combined pharmaceutical formulations. Appropriate doses of known therapeutic agents will be readily appreciated by those skilled in the art.

All publications, including but not limited to patents and patent applications cited in this specification are herein incorporated by reference as if each individual publication were specifically and individually indicated to be incorporated by reference as though fully set forth.

Claims

1. Compounds of Formula (Ia) :

wherein:

5 A represents hydroxy;

D represents aryl or heteroaryl;

10 E represents hydrogen, C₁₋₆alkyl, aryl, heteroaryl or heterocyclyl;

G represents hydrogen or C₁₋₆alkyl optionally substituted by one or more substituents selected from halo, OR¹, SR¹, C(O)NR²R³, C(O)R⁴, CO₂R⁴, NR²R³, NHC(O)R⁴, NHCO₂R⁴, NHC(O)NR⁵R⁶, SO₂NR⁵R⁶, SO₂R⁴, nitro, cyano and heterocyclyl;

15 R¹ represents hydrogen, C₁₋₆alkyl, arylalkyl, or heteroarylalkyl;

R² and R³ are independently selected from hydrogen, C₁₋₆alkyl, aryl and heteroaryl; or R² and R³ together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group;

20 R⁴ is selected from the group consisting of C₁₋₆alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl;

25 R⁵ and R⁶ are independently selected from the group consisting of hydrogen, C₁₋₆alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl; or R⁵ and R⁶ together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group; and

J represents C₁₋₆alkyl, heterocyclalkyl, arylalkyl or heteroarylalkyl;

30 provided that i) E and G are not both hydrogen; and
ii) the compound is other than

4-ethenyl-1-(2-nitrobenzoyl)-2,2-pyrrolidinedicarboxylic acid, diethyl ester;

1-(2-aminobenzoyl)-4-(1-hydroxyethyl)-2,2-pyrrolidinedicarboxylic acid, diethyl ester;

4-(1-hydroxyethyl)-1-(2-nitrobenzoyl)-2,2-pyrrolidinedicarboxylic acid, diethyl ester;

35

and salts, solvates and esters thereof; provided that when A is esterified to form -OR where R is selected from straight or branched chain alkyl, aralkyl, aryloxyalkyl, or aryl,

then R is other than *tert*-butyl.

2. A compound as claimed in claim 1 selected from the group consisting of:

- 5 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 10 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-fluoromethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-hydroxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 15 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-hydroxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-allyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-propyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 20 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-isopropenyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 25 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-isopropyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- (2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 30 (2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- (2S,4S,5R)-2-Isobutyl-1-(3-bromo-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- (2S,4S,5R)-2-Isobutyl-1-(3-chloro-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- 35 (2S,4S,5R)-2-Isobutyl-1-(3-methyl-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
- rel*-(2R,4R,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-

- thiazol-2-yl)-pyrrolidine-2-carboxylic acid;
rel-(2R,4R,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)-pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyrazin-2-yl)pyrrolidine-2-carboxylic acid;
5 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyrazin-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(5-methyl-1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
10 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(5-methyl-1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(2-chloro-1,3-thiazol-5-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(2-methoxy-1,3-thiazol-5-yl)pyrrolidine-2-carboxylic acid;
15 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-((methylthio)methyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-((methanesulfonyl)methyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
20 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1,1-difluoroethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1-hydroxy-1-methylethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2R,4S,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(1,3-thiazol-2-yl)-pyrrolidine-2-carboxylic acid;
25 *rel*-(2R,4S,5R)-2-Benzyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-2-yl)-pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyridin-2-yl)pyrrolidine-2-carboxylic acid;
30 (2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1-hydroxy-1-methylethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1-hydroxyethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;
rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethoxymethyl-5-(1,3-thiazol-4-yl)pyrrolidine-2-carboxylic acid;
35 *rel*-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-allyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;

rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-propyloxymethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;

rel-(2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-cyanomethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;

5 (2S,4S,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-(1-hydroxy-1-methylethyl)-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;

rel-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-ethyl-5-(1,3-thiazol-2-yl)pyrrolidine-2-carboxylic acid;

10 *rel*-(2S,4R,5R)-2-Isobutyl-1-(3-methoxy-4-*tert*-butylbenzoyl)-4-methoxymethyl-5-(pyrid-2-yl)-pyrrolidine-2-carboxylic acid;

and salts, solvates and esters, and individual enantiomers thereof where appropriate.

3. A method of treating or preventing viral infection which comprises administering to
15 a subject in need thereof, an effective amount of a compound of Formula (I)

wherein:

A represents hydroxy;

20 D represents aryl or heteroaryl;

E represents hydrogen, C₁₋₆alkyl, aryl, heteroaryl or heterocyclyl;

25 G represents hydrogen or C₁₋₆alkyl optionally substituted by one or more substituents selected from halo, OR¹, SR¹, C(O)NR²R³, C(O)R⁴, CO₂R⁴, NR²R³, NHC(O)R⁴, NHCO₂R⁴, NHC(O)NR⁵R⁶, SO₂NR⁵R⁶, SO₂R⁴, nitro, cyano and heterocyclyl;

R¹ represents hydrogen, C₁₋₆alkyl, arylalkyl, or heteroarylalkyl;

30 R² and R³ are independently selected from hydrogen, C₁₋₆alkyl, aryl and heteroaryl; or R² and R³ together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group;

35 R⁴ is selected from the group consisting of C₁₋₆alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl;

R^5 and R^6 are independently selected from the group consisting of hydrogen, C_{1-6} alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl; or R^5 and R^6 together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group; and

5 J represents C_{1-6} alkyl, heterocyclalkyl, arylalkyl or heteroarylalkyl;

and salts, solvates and esters thereof; provided that when A is esterified to form -OR where R is selected from straight or branched chain alkyl, aralkyl, aryloxyalkyl, or aryl, then R is other than *tert*-butyl.

- 10 4. A method as claimed in claim 3 which involves inhibiting HCV.
5. A method as claimed in claim 3 in which the compound is administered in an oral dosage form.

15 6. A compound of Formula (I)

wherein:

20 A represents hydroxy;

D represents aryl or heteroaryl;

25 E represents hydrogen, C_{1-6} alkyl, aryl, heteroaryl or heterocyclalkyl;

G represents hydrogen or C_{1-6} alkyl optionally substituted by one or more substituents selected from halo, OR^1 , SR^1 , $C(O)NR^2R^3$, $C(O)R^4$, CO_2R^4 , NR^2R^3 , $NHC(O)R^4$, $NHCO_2R^4$, $NHC(O)NR^5R^6$, $SO_2NR^5R^6$, SO_2R^4 , nitro, cyano and heterocyclalkyl;

30 R^1 represents hydrogen, C_{1-6} alkyl, arylalkyl, or heteroarylalkyl;

R^2 and R^3 are independently selected from hydrogen, C_{1-6} alkyl, aryl and heteroaryl; or R^2 and R^3 together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group;

35 R^4 is selected from the group consisting of C_{1-6} alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl;

R^5 and R^6 are independently selected from the group consisting of hydrogen, C_{1-6} alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl; or R^5 and R^6 together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group; and

5

J represents C_{1-6} alkyl, heterocyclylalkyl, arylalkyl or heteroarylalkyl;

and salts, solvates and esters thereof; provided that when A is esterified to form -OR where R is selected from straight or branched chain alkyl, aralkyl, aryloxyalkyl, or aryl, then R is other than *tert*-butyl;

10

for use in medical therapy.

7. A compound as claimed in claim 6 wherein the medical therapy is the treatment of viral infection.

15

8. A compound as claimed in claim 7 wherein the viral infection is HCV.

9. Use of a compound of Formula (I)

20

wherein:

A represents hydroxy;

D represents aryl or heteroaryl;

25

E represents hydrogen, C_{1-6} alkyl, aryl, heteroaryl or heterocyclyl;

G represents hydrogen or C_{1-6} alkyl optionally substituted by one or more substituents selected from halo, OR^1 , SR^1 , $C(O)NR^2R^3$, $C(O)R^4$, CO_2R^4 , NR^2R^3 , $NHC(O)R^4$, $NHCO_2R^4$, $NHC(O)NR^5R^6$, $SO_2NR^5R^6$, SO_2R^4 , nitro, cyano and heterocyclyl;

30

R^1 represents hydrogen, C_{1-6} alkyl, arylalkyl, or heteroarylalkyl;

R^2 and R^3 are independently selected from hydrogen, C_{1-6} alkyl, aryl and heteroaryl; or R^2 and R^3 together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group;

35

R^4 is selected from the group consisting of C_{1-6} alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl;

- 5 R^5 and R^6 are independently selected from the group consisting of hydrogen, C_{1-6} alkyl, aryl, heteroaryl, arylalkyl, and heteroarylalkyl; or R^5 and R^6 together with the nitrogen atom to which they are attached form a 5 or 6 membered saturated cyclic group; and

J represents C_{1-6} alkyl, heterocyclalkyl, arylalkyl or heteroarylalkyl;

- 10 and salts, solvates and esters thereof; provided that when A is esterified to form -OR where R is selected from straight or branched chain alkyl, aralkyl, aryloxyalkyl, or aryl, then R is other than *tert*-butyl;
in the manufacture of a medical for the treatment of viral infection.

- 15 10. Use as claimed in claim 9, wherein the viral infection is HCV.

11. A pharmaceutical formulation comprising a compound of Formula (I) as defined in claim 3 in conjunction with a pharmaceutically acceptable diluent or carrier.

- 20 12. A process for the preparation of a compound of Formula (I) as defined in claim 3, comprising treatment of a compound of Formula (II)

in which A is *tert*-butoxy, and D, E, G and J are as defined for Formula (I), with an acid.

ABSTRACT OF THE DISCLOSURE

5 Anti-viral agents of Formula (I)

wherein:

10 A represents hydroxy; D represents aryl or heteroaryl; E represents hydrogen, C₁₋₆alkyl, aryl, heteroaryl or heterocyclyl; G represents hydrogen or optionally substituted C₁₋₆alkyl; J represents C₁₋₆alkyl, heterocyclalkyl, arylalkyl or heteroarylalkyl;

and salts, solvates and esters thereof; provided that when A is esterified to form -OR where R is selected from straight or branched chain alkyl, aralkyl, aryloxyalkyl, or aryl, then R is other than *tert*-butyl;

15 processes for their preparation, pharmaceutical compositions comprising them, and methods of using them in HCV treatment are provided.
